

OPEN GROUNDS

PRODUCT REQUIREMENTS DOCUMENT v3.0

KYB/KYC • AI Agent Due Diligence • Data Governance • Banking & Cash Flow • Investor Protection

Draft desain produk | 9 Oktober 2026 | Bahasa Indonesia

Baseline: Open Grounds PRD v2.0 (18 halaman), Oktober 2026. Dokumen ini memperluas desain tanpa mengubah prinsip ekonomi inti v2.

CONFIDENTIAL — PROPOSED PRODUCT DESIGN / PRE-LEGAL VALIDATION

Document control

Item	Keputusan / status
Versi	3.0 — proposed revision
Pemilik keputusan	Product, Legal/Compliance, Finance, Risk, Engineering
Baseline retained	Venue-specific beneficial ownership via SPV/custody; distribusi bulanan; lock-up 6 bulan; liquidity non-guaranteed
Belum ditetapkan	Klasifikasi hukum, partner berizin, beneficial interest, struktur rekening final, fee, pajak, legal transfer, partner data
Gate	TIDAK boleh diluncurkan kepada publik sebelum legal counsel dan jalur regulator/mitra terkonfirmasi

1. Executive summary

Open Grounds menghubungkan pemilik venue olahraga produktif dengan investor melalui token yang merepresentasikan hak kepemilikan manfaat (beneficial ownership) atas economic interest yang teridentifikasi dalam struktur aset/SPV. Venue tetap dioperasikan oleh operator berdasarkan perjanjian; pendapatan yang memenuhi definisi offering dikumpulkan melalui payment/collection rails terkontrol, direkonsiliasi dengan booking/POS/bank, dikurangi komponen waterfall yang diizinkan, lalu dibagikan secara proporsional kepada pemegang hak sesuai offering dan legal agreement.

Revisi v3 mempertegas: (a) verifikasi perusahaan dan aset, (b) AI agent sebagai pembantu investigasi berbasis bukti dan bukan pemberi persetujuan final, (c) field-level data dictionary dan klasifikasi publik/private, (d) rekening dana investor vs venue vs distribusi, (e) hak persetujuan pencairan, (f) audit, investigasi, default dan perlindungan investor.

2. Asumsi dan aturan yang dipertahankan dari v2

Topik	Keputusan yang dipertahankan
Underlying	Satu token series per venue/economic pool; tidak otomatis per lapangan / per PT
Kepemilikan	Economic/beneficial interest harus dapat ditegakkan melalui AssetCo/custodian/SPV, bukan sekadar janji

	persentase omzet PT
Distribusi	Target bulanan berdasarkan perhitungan final dan cadangan; tidak dijamin
Lock-up	Token primary issuance tidak boleh dijual/dipindahkan selama 6 bulan kalender sejak settlement
Exit	Setelah lock-up hanya bisa mengajukan penjualan sesuai likuiditas tersedia
Validasi revenue	Booking + pembayaran + rekening bank + akuntansi; laporan owner saja tidak cukup
Peran platform	Marketplace, verifikasi, administrasi, reporting; tidak otomatis mengoperasikan venue
Regulasi	Klasifikasi instrumen, izin, custody, secondary trading dan pembayaran wajib divalidasi terpisah

3. Gap audit PRD v2 → cakupan PRD v3

ID	Gap v2	Penambahan dalam v3
G-01	KYB hanya level alur	KYB playbook, sumber verifikasi, beneficial owner, review & re-KYB
G-02	AI belum didefinisikan	Agent topology, tools, evidence, confidence, guardrails, human review
G-03	Dokumen/data hanya kategori	Data dictionary field-level, required/conditional, PII, access, retention
G-04	Rekening hanya segregated principle	Ledger architecture, akun, money movement, approval, refund, payout
G-05	Disbursement closing belum detail	Use-of-proceeds, milestones, beneficiary verification, hold rules
G-06	Revenue monitoring broad	Event schema, 4-way reconciliation, anomaly rules, dispute handling
G-07	Risk scoring belum operasional	Scorecards, hard stops, exception queue, operational SLAs
G-08	Investor & owner dashboard high-level	Functional specs, permissions, states, notifications
G-09	API/security general	Canonical entities, API contracts, event log, nonfunctional requirements
G-10	Legal open questions	Decision register dan mandatory go/no-go gates

4. Persona, pihak dan pemisahan tugas

Pihak	Tanggung jawab	Tidak boleh
PlatformCo	App, due diligence orchestration, marketplace, investor experience, monitoring	Mencampur uang investor/venue dengan kas perusahaan
AssetCo/Custodian / per-venue SPV	Memegang/mengendalikan hak legal yang mendasari token, dokumentasi dan rekening sesuai hukum	Menggunakan aset ring-fenced untuk utang platform
Venue Owner (legal owner)	Membuktikan aset dan menyerahkan hak sesuai transaction docs	Menjual/menjaminkan hak yang ditokenisasi di luar ketentuan
Venue Operator	Booking, SDM, maintenance, data akses, laporan biaya	Alihkan booking/revenue dari controlled collection
Payment/PJP/Bank	Penerimaan rupiah, rekening penampung, settlement, payout sesuai lisensi	Secara otomatis dianggap penyelenggara kustodi token
Digital asset/custody/trading partner	Fungsi token/custody/transfer terotorisasi bila diwajibkan	Melebihi lingkup izin
Independent accountant/auditor	Validasi revenue, biaya, cadangan dan waterfall	Mengandalkan spreadsheet sepihak tanpa verifikasi
Risk/Compliance	KYC/KYB, monitoring fraud, sanction, eskalasi	Mendelegasikan keputusan final pada agent tanpa supervisi
AI agents	Ekstraksi, pencocokan, identifikasi gap, penyiapan rekomendasi terbukti	Menerima venue/mentransfer uang/membekukan aset sendiri

5. End-to-end business process

1. Owner onboard sebagai organisasi, menyatakan venue dan tujuan funding; consent dan data processing notice diterima.
2. Pemeriksaan identitas PT, UBO/pengendali, dokumen legal, kewenangan penandatanganan dan bukti hak atas venue.
3. Penilaian venue: data booking, pembayaran, POS, bank dan keuangan historis dibandingkan; audit fisik/independen bila diperlukan.
4. Legal menyetujui struktur pengalihan hak ke SPV/custody, valuasi, aturan distribusi, penggunaan dana, waterfall, exit dan investor disclosure.
5. Offering diterbitkan; investor KYC/suitability dan membayar melalui PJP ke rekening client/escrow/collection yang terpisah sesuai struktur legal.
6. Ketika funding close dan CP (conditions precedent) tercapai, dana dilepas ke penerima yang sah sesuai dokumen transaksi serta pembatasan tujuan penggunaan.
7. Operator berjalan; booking dan pembayaran mengalir ke controlled venue collection; raw events masuk ke reconciliation engine.
8. Setelah month close, biaya terverifikasi dan reserve/fee dihitung; dua pihak menyetujui distribusi; IDR dikreditkan lalu bisa withdraw.

9. Token primary locked 6 bulan; sesudahnya dapat mengajukan secondary sale/repurchase jika tersedia dan diizinkan.
10. Bila default/fraud: hold, cure, step-in/replacement, reserve draw, asset sale/remedies sesuai dokumen legal.

6. Owner / Organization KYB: workflow operasional

6.1 Status KYB

DRAFT → SUBMITTED → AUTOMATED_CHECK → NEEDS_INFO / IN_REVIEW → ENHANCED_DD (bila perlu) → APPROVED / REJECTED → ACTIVE_MONITORING → RE-KYB / SUSPENDED.

6.2 Hard-stop sebelum approval

- Identitas perusahaan tidak cocok dengan sumber resmi atau legal authority penandatanganan tidak dapat dibuktikan.
- UBO / pengendali tidak bisa diidentifikasi sampai ambang yang diwajibkan oleh legal policy.
- Hak kepemilikan/sewa venue tidak jelas, terdapat sengketa material belum terselesaikan, atau larangan transfer.
- Rekening penerima tidak dapat diverifikasi kepemilikan/mandatnya.
- Data revenue independen tidak dapat direkonsiliasi sampai ambang minimum yang disepakati.
- Indikasi manipulasi dokumen, sanksi/AML hit signifikan, atau fraud serius yang belum diinvestigasi.
- Struktur legal, izin, dan payment/custody partners belum disetujui.

6.3 KYB checks dan evidence

Check	Cara verifikasi yang disarankan	Evidence/hasil
Registration	Cocokkan nama, nomor identitas, status, alamat dan pengurus terhadap registry resmi yang secara sah dapat diakses	Registry source, timestamp, screenshot/API response, match result
Shareholding & UBO	Cap table, akta perubahan, deklarasi pengendali, validasi independen	Ownership graph, beneficial owners, unresolved links
Authority	Tanda tangan, specimen, keputusan/kuasa, kapasitas direksi	Authorized signatory approval
Venue rights	Sertifikat/perjanjian sewa/BOT, jangka waktu, persetujuan pihak terkait	Asset-rights checklist, expiry, encumbrances
Bank verification	Nama penerima dibanding identitas entitas; pembuktian rekening via partner resmi	Bank account verification result
Regulatory	NIB/izin sektor, izin bangunan/operasional sesuai konteks	License check log, exceptions
Financial	Bank statements, sales ledger, invoice, tax and audited statements where applicable	Cross-source variance and adjusted model
Operational	Booking/POS/API dan site visit, okupansi/capacity	Operating evidence and anomaly list
AML & reputation	Screening pihak terkait dan adverse	Reviewer disposition, dated

Catatan: akses ke AHU/OSS, database perizinan, pertanahan, atau bank tidak boleh diasumsikan publik ataupun tersedia API. Implementasi membutuhkan verifikasi akses legal, kerja sama, dan metode verifikasi alternatif.

6.4 Recertification / trigger re-KYB

- Tinjau ulang berkala dengan frekuensi berbasis risiko yang ditetapkan compliance (usulan: 12 bulan untuk risiko rendah).
- Langsung review jika UBO/direksi berubah, izin/sewa mendekati kedaluwarsa, rekening berubah, operator diganti, revenue turun signifikan, hit AML, sengketa baru, atau payment diversion terdeteksi.
- Ubah rekening payout/collection hanya melalui verification + dual approval + cooling-off policy; old account tidak boleh otomatis ditimpa.

7. KYB data dictionary — perusahaan dan individu

Klasifikasi: PUBLIC/RESTRICTED = dapat diakses terbatas pada registry tertentu; PRIVATE = data owner yang tidak tersedia umum; SENSITIVE = informasi personal/keuangan/rahasia. “Public” bukan izin bebas menyalin atau memproses; semua pemakaian tunduk hukum, terms sumber dan prinsip minimisasi.

Field / owner	Wajib	Data class	Sumber	Validasi
legal_name / Company	Required	Public/restricted	Corporate docs + registry	Exact/legal alias matching
registration_number / Company	Required	Restricted	Registry/akta	Unique, format/validity
tax_id_npwp / Company	Required if applicable	Sensitive	Tax document	Match legal name
nib / Company	Required where applicable	Restricted	OSS/owner docs	Status / category / timestamp
incorporation_date / Company	Required	Restricted	Deed/registry	Dates consistent
registered_address / Company	Required	Public/restricted	Deed/registry	Address normalization
operational_addresses / Company	Required	Private	Site evidence	Location match
business_activity_kbli / Company	Required	Restricted	OSS / deed	Activity fit
legal_status / Company	Required	Restricted	Authorized registry	Active / restrictions
directors_commissioners / Company	Required	Restricted/sensitive	Deed and ID checks	Persons and authority
shareholder_cap_table / Company	Required	Sensitive	Akta/cap table	100% ownership roll-up
ubo_persons_and_percent / UBO	Required	Sensitive	Declaration + supporting docs	Control graph verified
signatory_authority / Company	Required	Sensitive	Board resolution/power of attorney	Valid mandate

company_bank_account / Bank	Required	Sensitive	Bank/provider proof	Name match + verified
court_disputes_declaration / Company	Required	Private	Declaration + legal checks	Disclose material matters
debt_encumbrance_schedule / Company	Required	Sensitive	Lender/owner docs	Independent review
kyb_consent_notice / Company	Required	Sensitive	Signed digital consent	Version, purpose, time
kyb_risk_rating / System	Derived	Internal restricted	Risk engine + reviewer	Reviewer approval

Data individu khusus direktur, authorized signatory dan UBO: legal full name, role, date of birth (bila perlu), nationality, identity-document type/number, identity expiration, selfie/liveness bila disyaratkan, contact, sanctions/PEP result, ownership/control percentage, consent, residency dan screening case IDs. Semua diperlakukan PRIVATE/SENSITIVE, dengan akses need-to-know dan masking.

8. Venue, asset & legal-rights data dictionary

Field group	Requirement	Class	Source
venue_id, legal_entity_id, operator_id	Required	Internal	Master data
venue_name, venue_address, geo, sport_type	Required	Mixed	Site/docs/map
court_count, hours, max_slots, price_card	Required	Mixed	Site + booking
ownership_type: freehold/lease/BOT/other	Required	Sensitive	Legal docs
title_or_lease_document, owner_name, dates	Required	Sensitive	Deed/lease/title
lease_term, renewals, assignments, consent	Conditional	Sensitive	Lease / legal
encumbrances, pledges, litigation	Required	Sensitive	Declaration + counsel
permit_document_ids, status, expiry	Required if applicable	Restricted	Regulators/docs
insurance_policy, coverage, expiry	Required before close	Sensitive	Insurer/docs
historical_bookings, refunds, discounts	Required	Private	Booking API/export
pos_orders, payment_txns, bank_settlements	Required	Sensitive	POS/PJP/bank
occupancy, avg_price,	Derived	Private	Reconciliation

churn			
payroll, utility, rent, maintenance, tax	Required	Sensitive	Finance evidence
asset appraisal, assumptions, appraiser	Required	Sensitive	Independent valuation
tokenized_interest_pct, SPV/legal doc	Required	Sensitive	Signed term/legal
capex_plan, fund-use milestones	If capex use	Sensitive	Owner plan/invoices

9. Investor KYC / account dictionary

Kelompok	Field minimum / kondisional	Klasifikasi
Identity	user_id, full_name, DOB if required, identity type/number, ID status, nationality/residency	Sensitive
Contact	phone, email, verified status, delivery preferences	Private
AML/suitability	sanction/PEP checks, risk tier, investor category, risk acknowledgement/version	Sensitive
Payment	bank_name, masked_bank_account, account_name, verification_status, payment reference	Sensitive
Investment	offer_id, token series, units, amount, settlement timestamp, lock-until, ownership lot	Private
Payout	distribution entry, gross, withholding, net, approval reference, withdrawal destination	Sensitive
Audit & consent	consent versions, device/security signals, case references	Sensitive

10. AI Agent due diligence architecture — proposed

AI tidak menjadi legal decision maker atau autonomous money mover. Output setiap agent bersifat rekomendasi yang disertai referensi bukti, identitas sumber, waktu pengambilan data, confidence, dan daftar hal yang perlu diverifikasi manusia.

Agent	Input / tools	Output	Guardrail
Intake & OCR	Uploaded documents, parser, schema extractor	Field candidates and document checks	Tidak mengklaim dokumen asli hanya dari OCR

Entity Resolver	Registry yang berizin/diizinkan, shareholder docs	Match and mismatch report	No unsupported source access
UBO Graph	Ownership docs, identity evidence	Control graph, unresolved owners	Human review for complex structures
Asset Rights Reviewer	Lease/title/legal docs, permits	Title/tenure red flags, expiry matrix	Legal counsel final approval
Financial Reconciliation	Bank/PJP/POS/booking/accounting connectors	Revenue/expense tie-out and anomalies	Source ledgers immutable
Fraud Signals	Duplicates, tamper metadata, related-party patterns	Fraud flags and explanation	No automatic accusation
Risk Summary	All evidence & policies	Draft score and reviewer checklist	Reviewer overrides recorded
Monitoring Agent	Daily bank/booking/permit/operator events	Watchlist alerts, new cases	No autonomous fund freeze unless deterministic policy

10.1 Agent orchestration

Upload/connect → Virus scan & secure intake → Document extraction → Structured schema validation → Official-source match (where permitted) → UBO/legal/financial parallel checks → Evidence graph → deterministic policy engine → AI risk narrative → analyst review → compliance approval → legal/finance signoff.

10.2 LLM controls

- RAG hanya pada sumber/rekaman yang diizinkan; per-agent allowlist tools dan least privilege.
- Output harus structured JSON dengan schema version dan source_refs; fakta tanpa bukti diberi status UNVERIFIED, bukan diisi tebakan.
- Prompt injection sanitization: isi dokumen pihak ketiga diperlakukan data tidak tepercaya, bukan instruksi agent.
- Data pribadi sensitif tidak dikirim ke provider AI eksternal tanpa persetujuan, dasar pemrosesan, perjanjian vendor dan kontrol keamanan yang sah.
- Tidak menyimpan rahasia/credential di prompts; mask identitas/bank fields untuk role yang tidak berwenang.
- Audit: model version, prompt version, source hashes, invocation ID, approver, corrections, human overrides, output revisions.
- Evaluasi akurasi per field dan false positives; adverse-case testing, bias review, prompt-injection tests, rollback/kill switch.
- Agent tidak boleh mengeksekusi approval final, issue tokens, mengubah rekening, transfer uang, atau override hit AML.

10.3 Example agent output contract

kyb_case_id; org_id; agent_name; run_id; check_type; finding_code; severity; finding_text; field_paths; source_refs; verified_at; confidence; data_freshness; missing_evidence; proposed_action; requires_human_review=true; model_version; source_sha256. Reviewer disposition: accepted/overridden/request_info/rejected + reason.

11. Risk scoring, KYB review & exception matrix

Usulan kebijakan skor bukan standar hukum: hard-stops selalu lebih tinggi daripada skor gabungan. Score weights, thresholds, underwriting criteria, suitability dan monitoring policy harus disahkan Risk/Legal.

Dimension	Contoh signal	Contoh respons
Entity & UBO	Mismatch pengurus, layer kepemilikan tidak jelas	Request proof / EDD / hard stop
Asset title/tenure	Sewa pendek tanpa hak alih; aset bersengketa	Legal block
Financial quality	Cash flows tidak dapat dikonfirmasi / bank variance	Reject or enhanced checks
Operational	Booking data tidak lengkap, occupancy mencurigakan	Site visit + API mandate
Fraud / AML	Fake invoice, related-party diversion, sanctions	Escalate and block if mandated
Platform risk	Partner/payment rail tidak mendukung use case	No go-live

Queue wajib: case_id, entity, SLA, priority, owner, trigger, affected offering/month, source IDs, amount at risk, action history, approval and customer notification status. Target SLA diajukan saat pilot dan diuji terhadap kapasitas operasional nyata.

12. Banking architecture — money segregation

Desain berikut adalah PROPOSAL, bukan klaim bahwa sebuah jenis rekening atau skema escrow pasti diizinkan untuk token ini. Nama pemilik, bank, signing rights, fund safeguarding, payment licensing, insolvency isolation dan hak beneficial holder harus divalidasi penasihat hukum serta mitra berizin.

Account / ledger	Sumber dana	Tujuan	Kontrol minimum
A. Investor offering collection	Investor → approved PJP	Menampung setoran offering sebelum close/refund	Terpisah dari PlatformCo; order matching; no unauthorized disbursement
B. SPV acquisition / closing	A setelah CP terpenuhi	Pembayaran transfer hak/asset per closing docs	Dual approval; named beneficiaries; executed legal documents
C. Venue collection	Booking/POS/payment gateway	Terima gross venue eligible revenue	Controlled collection; ledger attribution by venue; no unapproved diversion
D. Operator operating	Approved transfer dari C	Payroll/utilities/ maintenance sesuai budget	Caps, expense evidence, approval threshold
E. Venue reserves	Sweep dari C sesuai waterfall	Maintenance, tax and liquidity reserves	Segregated accounting; release policy
F. Investor distribution	Approved net distributable funds	IDR payout to verified investor bank	Record-date snapshot, tax deductions, maker-checker
G. Platform revenue	Approved disclosed fees	Open Grounds operational cash	Hanya fees owned by PlatformCo

12.1 Canonical investor subscription flow

- Investor lolos KYC + suitability; order dibuat berstatus AWAITING_PAYMENT dengan unique reference.
- Investor bayar IDR melalui PJP yang menyetujui use case; webhook signed dan idempotent diterima.
- Funds tercatat di offering collection account dan subledger per investor/order/offering; tidak menjadi uang operasional platform.
- Funding closing reconciliation: jumlah diterima, fee/charge, gagal/refund, dan exact matched orders.
- Legal closing CP terpenuhi: SPV/custody documents, enforceable rights, appraisal, approvals, onboarding evidence, insurance, reserves, settlement arrangement.
- Payout to legally entitled beneficiary dilakukan secara terkontrol berdasarkan closing instruction; fee dibukukan terpisah dan investor mendapat token allocation setelah token/settlement confirmation sesuai ketentuan.
- Jika gagal/expired/cancelled: refund menurut term penawaran, dengan reconciliation, AML checks dan notice.

12.2 Pilihan dana closing: belum final

Model	Bisa dipakai kapan	Risiko / verifikasi
Asset sale/acquisition	SPV membeli ownership/economic interest dari owner	Proof of title, transfer taxes, consideration beneficiary
Capital contribution into SPV	Owner menyeter hak/aset dan SPV didanai	Corporate approvals, capitalization, dilution mechanics
Dedicated capex financing	Dana dipakai untuk ekspansi dalam perjanjian berbeda	JANGAN diam-diam diklaim beneficial ownership; klasifikasi legal/financing berbeda
Staged vendor payment	Dana hanya cair melawan invoice/milestone yang sah	Legal rights of beneficial owners, vendor verification

Tidak boleh menentukan “otomatis cair ke PT owner” sebagai default universal; alur harus mengikuti perjanjian transaksi underlying yang benar-benar terjadi.

12.3 Owner disbursement policy

Gate	Required check / action
Beneficiary	Legal name + bank name match + ownership/mandate validation
Closing pack	Signed sale/contribution/custody/operator agreements + register updates
Funding	Collected amount $\geq$ legally specified close condition; reconciliation exact
Restrictions	Pledge/consent/lender clearance, notices, taxes, compliance approval
Approval	Maker (Finance) → Checker (independent Finance/Risk) → authorized payment signatory
Execution	Bank/PJP payout idempotent request; confirmation + bank proof
Exceptions	Account mismatch / payment reject → suspense queue, never manual silent reroute
Evidence	Capture approved docs, disbursement reference, bank settlement, amount + timestamp

13. Venue operations, collection and 4-way reconciliation

Setiap transaksi harus memiliki venue_id + booking_id + payment_reference + settlement_reference bila tersedia. Tidak semua perbedaan berarti fraud: partial payments, refunds, provider fees, timezone, cash settlement lag, chargebacks dan accrual timing harus ditangani.

Source	Minimum fields
Booking	booking_id, venue_id, court_id, slot_start/end, list_price, discount, final_amount, status, refund_id, created_at
PJP	provider_transaction_id, booking/order_ref, gross, fee, captured, refund, chargeback, status, settlement_batch, timestamps
Bank	bank_transaction_id, account_id, booking/batch_reference, credit/debit, value_date, settled_amount, running balance
POS	receipt_id, service/other revenue category, line items, tax, payment instrument, linked settlement
Accounting	journal_id, period, GL account, revenue, expense, invoice_id, supplier, tax, supporting doc
Document proof	document_id, owner, source, checksum, uploader, revision, validated_by

13.1 Reconciliation engine

18. Normalisasi source timestamps, currency, booking references, mapping venue/fees and provider settlement.
19. Match booking net of cancellations/refunds → captured payment → bank settlement → accounting recognized revenue.
20. Classification: MATCHED, TIME_LAG, REFUND_PENDING, PARTIAL, UNMATCHED_PAYMENT, MISSING_BOOKING, MISSING_BANK, AMOUNT_VARIANCE, DUPLICATE, POTENTIAL_DIVERSION.
21. Variance di atas threshold policy atau missing coverage menghasilkan exception case; materially unresolved items place month-close hold.
22. Investigasi dilakukan reviewer dengan source evidence; outcome correction journal, late settlement, fraud escalation atau justified override.
23. Freeze approved month-close snapshot dan reconcile opening/closing balances serta transaction-level ledger.

13.2 Anti-circumvention

- Channel booking harus terdaftar; perubahan payment-routing disetujui Open Grounds sesuai perjanjian dan legal mandate.
- Walk-in/cash only with POS invoice and enhanced checks; target channel coverage ditetapkan dalam underwriting.
- Monitor unusually large manual discounts, unusual refunds, blocked hours, related-party bookings dan ghost bookings.
- Site spot checks, independent counter checks atau mystery booking dapat menjadi opsi berbasis risiko, tunduk aturan privasi dan operasional.
- Integrasi langsung tidak menggantikan hak audit; kontrol harus menutup multi-channel booking dan transaksi offline.

14. Monthly distributions and withdrawal requirements

Waterfall v2: verified eligible gross revenue – refunds/cancellations – eligible operating expenses – taxes/statutory charges – operator fee – reserve – platform AUM/servicing fee = distributable amount. Distribusi economic rights mengikuti offering/legal terms; jangan menyamakan “10% token supply” dengan “10% dari keseluruhan venue” jika yang ditokenisasi hanya 50%.

24. Close revenue period: source ledgers snapshot dengan provenance.
25. Validate booked / collected / bank / accounting and expense evidence; unresolved exceptions flagged.
26. Calculate tax/fee/reserve + operator payout; account for prior adjustments and policies.
27. Validate token holder snapshot as-of record date; calculate token holder allocation from legally defined interest pool.
28. Dual approval: accountant/finance reviewer + second authorized approver.
29. Book investor distribution payable in per-investor IDR ledger (cash must be funded, not notional-only).
30. Investor receives report, gross/withholding/net, audit reference; withdraws to verified account after AML checks.
31. Payout provider settlement reconciled to investor cash ledger; failed payouts reversed/queued with clear customer status.

Example only: venue distributable income Rp125 juta; 50% economically allocated to token holders → Rp62,5 juta token-holder pool. Investor holding 10% of issued series receives Rp6,25 juta gross before investor-level tax/withholding, unless offering legal waterfall specifies otherwise.

15. Product specifications per surface

15.1 Owner portal

- Onboarding wizard: organization, signatory, UBO, venue, legal rights, data integrations, bank account, capital objective, desired tokenized percentage.
- Document vault: file versions, missing checklist, expiry and verification state, encrypted previews with role masking.
- KYB center: automated check state, requests for information, assigned reviewer, remediation action and deadline.
- Integrations: connected booking/POS/PJP/bank status, last sync, coverage, data quality, revocation consequences.
- Offer preparation: valuation assumptions, ownership share, cap table, legal rights, signing and closing checklist.
- Operating dashboard: bookings, gross/net revenue, cash receipts, exceptions, expense submission, reserves and distribution status.
- Compliance dashboard: warranties/covenants, insurance renewal, incident disclosures, re-KYB.

15.2 Investor app

- Venue detail: legal SPV/custodian, asset/economic pool, percent tokenized, valuation, cap table bridge, risk factors, fee schedule, revenue evidence coverage.
- Pre-buy acknowledgment of 6-month lock, rights, non-guaranteed income and illiquidity; investment amount and fees disclosed.
- Wallet: token lots/units, lock expiry, cash balance, distributions history, transaction references.
- Withdrawals: verified bank, fees, estimated time, pending/failed/completed, tax statement.
- Post-lock exit: indicative price vs executable quote explicitly separated; request, queue, cancellations and settlement.
- Risk events: suspension, default, expense anomaly, asset dispute and action updates shown transparently.

15.3 Internal admin

- KYB case management with source evidence, agent runs, reviewer dispositions, UBO graph and maker-checker signoff.
- Asset underwriting + per-venue risks, appraisal, legal CPs and bank verification.
- Cash operations: per-account cash position, payment/booking matching, reconciliation breaks, holds and payout batch controls.
- Distribution approvals, reconciliations, reversal controls, fee allocation and tax export.
- Default/incident queue, legal hold, regulator audit exports, investor notices, custody and token transfer logs.

16. Canonical data model

Entity	Primary / important fields
Organization	org_id, registration IDs, legal name, KYB state, risk_level, UBO_refs, signatory_refs
Person/BeneficialOwner	person_id, identity token, role, relationship, share_pct, verification refs
Venue/Right	venue_id, location, operator_id, tenure, asset_docs, risk and compliance state
SPV/AssetPool	spv_id, venue_id, economic_interest_scope, legal owner, encumbrances
DocumentEvidence	doc_id, type, class, checksum, access policy, extracted_fields, verification status
DataConnection	connection_id, source, consent_scope, token vault ref, sync_status, coverage
KYBCase / Finding	case_id, organization, finding_refs, reviewer, decisions, evidence hashes
BankAccount	account_id, legal_holder, masked_number, purpose, ownership_check, status
Offering / TokenSeries	offering_id, venue/spv, tokenized %, price/supply, rights, CP, legal term version
Subscription / Payment	order_id, account, offering, gross/fees, PJP ref, settlement ref
CashLedgerEntry	entry_id, account ledger, debit/credit, currency, reference, approvals
Booking/Settlement	booking_id, provider refs, bank refs, statuses, amounts, timestamps
MonthlyClose	period, gross, refunds, expenses, tax, reserve, fee, payout pool, approvals
Distribution/Payout	holding_lot, record_date, allocation, tax, available cash, bank payout state
SaleRequest	lot, unlocked_qty, mode, quote, queue priority, price, settlement
AuditEvent	who, action, entity, before/after, timestamp, IP/session, hash

17. Suggested APIs and event contracts

Interface	Example contract	Requirements
POST /organizations	create organization draft	RBAC + validation
POST /kyb/cases/:id/documents	signed upload URL + metadata	Virus scan, type allowlist, checksum
POST /kyb/cases/:id/submit	KYB state transition	Idempotency; required fields
POST /kyb/cases/:id/review	decision, evidence_refs, reviewer_reason	Maker/checker, audit
POST /connections/:type/link	scoped consent connection	Token vault, connector allowlist
POST /offerings/:id/orders	units, quote_version, ack_version	Suitability, price/lock disclosed
POST /webhooks/payments	provider payload + signature	Replay protection + dedup
POST /finance/month-close	period, venue, source snapshots	Immutable snapshot
POST /distributions/:id/approve	distribution plan + approvals	Dual-control; pool funded
POST /withdrawals	verified destination + amount	AML check + double-spend control
POST /sale-requests	lot, qty, price condition	Enforce unlock and trading rules

Event topics proposed: KYBSubmitted, KYBCheckCompleted, KYBApproved, VenueRiskChanged, BankAccountChanged, PaymentCaptured, PaymentSettled, BookingPaid, ReconciliationExceptionOpened, MonthCloseApproved, DistributionCredited, WithdrawalSettled, TokenUnlocked, SaleRequestSubmitted, AssetDefaulted. Each must include event_id, occurred_at, producer, schema_version, entity_id, correlation_id, dedup_key and audit context.

18. Security, privacy and data lifecycle

- Purpose limitation: collect only fields needed for KYB, ownership rights, transaction compliance and ongoing operations; privacy notice identifies purposes, recipients, retention and rights.
- Data class enforcement by field, encrypt in transit and at rest, KMS/HSM, secret vault, restricted production access, MFA, RBAC/ABAC and just-in-time elevated access.
- Keep full identity scans/bank statements away from general product analytics and LLM context unless strictly required; use masked/tokenized representations.
- Signed URLs for sensitive uploads, malware scanning, document lineage and hash; redact sensitive document excerpts in agent summary.
- Consent and contractual data access separately recorded for booking/POS/bank integrations; revocation/expiry triggers data-quality and funding eligibility evaluation.
- Retention durations remain TBC by legal/privacy review; deletion/anonymization follows legal retention, audit and evidence hold requirements.
- Data residency/cross-border transfer and AI vendor subprocessors must be approved; maintain breach notification and DSAR procedures.
- Ledger and audit records immutable/tamper-evident; correction via reversing entries, not destructive edits.
- Security: penetration test, API signed webhooks, fraud rate limiting, incident response, disaster recovery, backup restore tests, key rotation.

19. Roles and maker-checker matrix

Action	Maker	Checker / signoff	Rule
--------	-------	-------------------	------

KYB approval	KYB analyst	Compliance approver	AI agent cannot approve
Valuation approval	Underwriting	Investment committee + legal as needed	Independent appraisal
SPV legal closing	Legal ops	Legal counsel / authorized signatory	All CP checked
Initial owner disbursement	Finance operator	Independent Finance + authorized bank signatory	Beneficiary and bank verified
Change payout bank	Customer request/ops	Independent risk/finance	Re-verify + cooldown
Month close	Finance preparer	Independent accountant/reviewer	Exception resolution
Distribution release	Finance preparer	Independent finance approver	Ledger funded and reconciled
Exceptional hold/override	Risk case officer	Compliance lead	Reason/evidence logged
Token transfer/secondary	Marketplace system	Regulated partner/controls per legal	No lock bypass

20. Functional requirements / acceptance criteria

ID	Feature	Acceptance criterion
FR-001	KYB required fields	Submission rejected with field-level errors if required fields/docs missing; evidence version retained.
FR-002	Company verification	No automatic approval on uploaded PDF alone; evidence source/type/time visible to reviewer.
FR-003	UBO completeness	Unresolved UBO graph blocks approval under policy; manual override logged only if legally allowed.
FR-004	AI explainability	Every material AI finding cites evidence ID and is marked verified/unverified; hallucination tests in QA.
FR-005	Bank beneficiary	Disbursement to mismatched beneficiary blocked until authorized documented resolution.
FR-006	Funds segregation	Investor money never recorded in PlatformCo operating cash; audited reconciliations pass.
FR-007	Settlement	Duplicate webhooks do not duplicate ledger entries or token allocation.
FR-008	Holding lock	Transfer/sale blocked at API and ledger/contract layer before six-

		calendar-month unlock.
FR-009	Income reconciliation	Booking ↔ PJP ↔ bank ↔ accounting discrepancies surfaced with owner and status.
FR-010	Month-close gate	Material unresolved variances block distribution approval.
FR-011	Distribution ownership	Investor payout = legal entitlement under offering × approved pool; token percentage distinction tested.
FR-012	Payout safety	Only verified same-name account can withdraw, except formally approved compliant exceptions.
FR-013	Reserve accounting	Every reserve movement has policy and cash ledger reference.
FR-014	Secondary sale	Unlocked holder only requests sale; no UI language guarantees liquidity or original-price buyback.
FR-015	Audit	Every approval, account change and money movement has actor, before/after, time and evidence.
FR-016	Privacy	Sensitive fields masked based on role and never included in ordinary analytics exports.
FR-017	Agent robustness	Malicious prompt text in uploaded file cannot issue instructions or access extra tools.
FR-018	Recon coverage	Missing provider/bank source above policy threshold blocks venue approval or monthly close.
FR-019	Default	Incident workflow can suspend distributions while preserving ledger and investor notices.
FR-020	Accountability	System produces reproducible investor statements from frozen approved snapshots.

21. Operational SLAs, metrics and pilot targets

Angka di bawah target proposal untuk disahkan saat pilot, bukan angka yang sudah diputuskan pada v2.

Metric	Proposed pilot target / metric definition
KYB turnaround	Track submission → decision median and p95 by risk tier (target TBC)
Automated extraction quality	Per-field precision/recall on curated documents (threshold after test set)
False-positive investigations	Track % alerts overturned and investigator hours per case

Settlement coverage	100% investor incoming payments mapped to order or exception before close
Reconciliation breaks	100% material breaks tracked by case ID; none silently suppressed
Distribution correctness	0 unapproved payouts; penny/rounding reconciliation to approved payable
Evidence completeness	100% approvals reference source docs and approvers
Bank change safety	100% account changes go through named verification + independent approval
Liquidity transparency	100% sale requests show mode, quote limitations and execution state
Availability & recovery	Define uptime, RTO/RPO, backup restoration per third-party partner dependencies

22. MVP scope and delivery plan

Phase	Scope	Exit gate
0 — Legal / partner discovery	Regulatory classification, legal structure, entity and bank/payment/custody partners, investor rights, taxes	Written counsel analysis and partner feasibility
1 — Controlled onboarding	1–3 venues; document vault; analyst KYB; deterministic registry/checklists; basic agent extraction; manual legal sign-off	No unresolved ownership/venue/revenue hard stop
2 — Primary offering / money	KYC investor; order+PJP; segregated funds; disbursement controls; token allocation; 6mo lock	End-to-end funded/refund dry runs + audit
3 — Venue operations / distributions	Booking/payment/bank connectors, case queue, month close, withholding, payout	Reconciliation replay + independent accounting review
4 — AI & monitoring scale	Multi-agent evidence graph, triggered re-KYB, alerts, expanded integrations	Evaluation benchmarks + operator controls
5 — Liquidity	Post-lock controlled sale/repurchase only if permitted and funded	Legal license, liquidity policy, stress tests

23. Adverse scenarios and required behavior

Scenario	Expected action
PT valid, venue sewa berakhir 3 bulan lagi	Pause offering; legal tenure review; no auto approve
Owner changes collection account	Block route until separate verification/authorization; notify risk
Fake uploaded bank statement	Compare direct bank proof and transaction feeds; flag

	mismatch and investigate
Bookings Rp300m, settlements Rp190m	Case with source-level variance; do not assume fraud; hold if material unresolved
Investment funding fails threshold	Apply offering terms for extension/refund; reconcile client money
Owner bankrupt after close	Invoke SPV/custody legal remedies; risk disclosure; no guarantee of capital recovery
Investor requests sale month 3	Reject at API, token and UI layers
Investor requests sale month 7, no buyer	Queue/notify with no guaranteed sale time or price
Payment provider webhook twice	Idempotency prevents second credit
AI extracts wrong director	Reviewer corrects field; re-run checks and preserve original output
Bank payout rejected	Ledger remains payable; reconcile failure and request verified correction
Regulatory or legal stop order	Freeze affected feature under authorized rule; preserve records and notify parties

24. Open decisions register (must resolve)

Priority	Decision / question	Decision owner
P0	Legal classification of sports venue beneficial ownership token under applicable framework	External counsel/regulatory
P0	Does physical title, leasehold or lesser economic interest legally qualify as underlying?	Legal
P0	Entity/SPV and ring-fencing format per venue; asset custody and insolvency treatment	Legal + Finance
P0	Name of bank account holder and permitted holding/escrow/client money mechanics	Legal + regulated bank/PJP
P0	Exact beneficiary and use-of-proceeds at funding close	Legal + owner + Finance
P0	Authority to direct venue collection, sweep reserves, restrict withdrawals, replace operator	Legal + banking partner
P0	Token issuance/custody/secondary trading licensing and partner responsibilities	Legal + regulator + partner
P0	Investor income entitlement, transfer, voting, asset sale, tax and waterfall	Legal + Finance
P0	Regulatory data use permissions, UBO/AML requirements, privacy and data retention	Compliance + Privacy

P1	Named booking/POS/PJP/bank integrations and refresh/coverage requirements	Engineering + Ops
P1	Agent provider, model deployment, data locality, evaluation and audit controls	Security + Engineering
P1	Risk thresholds, reserve percentage, underwriting minimums and cash-release approvals	Risk + Finance
P1	Historical financial record minimum (v2 prefers >=12mo), treatment of new venues	Investment committee
P1	Fee table incl. origination/AUM/operator/transaction and conflict policy	Finance + Product
P1	Payout tax withholding and reporting partner	Tax + Finance

25. Launch criteria / signoff

- Signed legal opinion and credible regulator/partner pathway; no assumption that the GORO benchmark automatically transfers to Open Grounds.
- Verified legal rights in the underlying pool; executable contracts; proof of ring-fencing and authorized custody.
- Bank/PJP/custodian/trading partner contracts establish account ownership, segregation, approved use, access and authorized signers.
- Owner/UBO/venue KYC/KYB tested against fraud and invalid-document scenarios; documented human review.
- Transaction-to-ledger-to-bank reconciliation replay tested on primary purchases, refunds, revenue collections and payouts.
- Distribution dry run matches frozen approved financial and holder snapshots; tax and reserve rules documented.
- Security/privacy assurance including data-processing agreements, incident response, agent red teaming and full audit log.
- Six-month primary token lock and post-lock liquidity limitations implemented in UI/API/token control and documented.
- Finance, Legal, Risk/Compliance, Engineering and Product sign off on go-live checklist.

Appendix A. Worked economic example and investor truth-in-marketing

Assume a venue economic value Rp4 billion; 50% beneficial interest offered at Rp2 billion, 200,000 tokens × Rp10,000. Investor purchases 20,000 tokens for Rp200m, hence 10% of token supply = 5% of whole venue economic interest, if rights map proportionally. If full-venue net distributable income for a month is Rp125m and token holders legally receive 50%, total token-holder share is Rp62.5m; investor receives 10% of this = Rp6.25m gross before applicable investor-level tax/withholding. Any deviation must be disclosed in the actual legal waterfall. This is an illustration, not yield guidance or guaranteed return.

Appendix B. What comes from v2 vs new proposal

Retained directly from v2	Additional proposal in v3
SPV/AssetCo beneficial-interest model	KYB verification schemas, source registry matching
Monthly cash distribution and independent verification	AI agents and evidence graph with human-in-loop
6-month lock; secondary liquidity conditional	Account architecture and maker-checker bank disbursement
Fee families: sourcing, AUM, transaction	Risk scoring, exception ownership and operational SLA
Token offering data and investor reporting	Field data classification, retention/security rules
Legal/regulatory validation disclaimer	Detailed decision register, API/events and release gates

DISCLAIMER: Dokumen adalah rancangan produk/teknis, bukan opini hukum, rekomendasi investasi, persetujuan OJK atau konfirmasi kelayakan rekening/produk. Legal counsel, pihak regulator dan partner berizin perlu mengesahkan instrumen, peran entitas, custody, kontrol dana, hak investor dan pajaknya sebelum publik launch.
